REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: applicant recites a launch system for a roller coaster comprised of a gripping conus, a connecting wire operably connected to the gripping conus, and a drive means connected to the gripping conus. The drive means is further comprised of a winch system, a turning sheave and a lifting cylinder removably connected to the connecting wire at its upper end and fixedly mounted on a base. Applicant also recites a method for using the system to launch and stop the roller coaster by using the hydraulic accumulators and pumps and projecting the gripping conus in the desired direction to either push or catch the vehicle.

The prior art taken singularly or in combination, does not adequately disclose the features recited in the prior art.

Specifically, the prior art of Spieldiener et al (US 6,679,182) discloses a roller coaster launch system having a gripping device to connect to the car and a connecting wire connected to the gripping device. However, Spieldiener et al does not disclose the use of a lifting cylinder removably connected to the connecting wire at its upper end.

Begotti (US 6,439,129) discloses a roller coaster launch system using sheaves and winches but does not disclose the connecting wire to be connected to a gripping device like the instant claims of the present invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
